SOLID WOOD PROFILES FOR WALLS AND CEILINGS

PRODUCT DESCRIPTION:

- finely planed
- shrink-wrapped, EAN-coded, labelled
- various lengths available

QUALITY:

- WMC (sawmill grade/ mixed grade A/B)

- ✓ energy-saving
- ✓ heat-insulating
- ✓ moisture-balancing
- ✓ breathable
- ✓ resistant
- ✓ durable
- ✓ low-maintenance & decorative

Examples of applications: Wall and ceiling cladding for interior, roof construction, exterior and gable cladding, roof soffits, door and gate construction, decorative wood cladding of all kinds, ...

SOLID WOOD, PLANED

PRODUCT DESCRIPTION:

- planed on four sides
- chamfered edges
- technically dried
- without shrink-wrapping
- individually EAN-coded

QUALITY:

- WMC (sawmill grade/
mixed grade A/B)

- ✓ climate-friendly
- ✓ no chemical wood protection
- ✓ no disposal problems
- ✓ environmentally friendly material

Examples of applications: Interior fittings, partitions, substructures, roof fittings, awnings, fence construction, trellises, frame construction, shelving construction, small pieces of furniture, ...

OUTDOOR WOOD

ENERGY WOOD

SUSTAINABILITY:
NOT JUST A BUZZWORD

Wood, the raw material of the future

- ✓ naturally renewable raw material
- ✓ our daily commitment to climate protection
- ✓ sustainable forestry

MULTI-PURPOSE PANELS:

- hot-dip galvanised C-profile edge protection
- planed on three sides
- rear side levelled
- oil pressure-treated
- EAN-coded

3-PLY FORMWORK PANELS:

- E-profile edge protection
- glued to be water and alkali-resistant (AW 100)
- hot-compressed artificial resin layer
- edges sealed

MULTIPURPOSE PANELS/ FORMWORK PANELS

- ✓ durable
- ✓ excellent stability/
service life

Examples of applications: Structural works, shuttering, scaffolding, covering, multifunctional uses, ...

3-LAYER PANELS, EXCLUSIVE, SPRUCE/FIR

PRODUCT DESCRIPTION:

- 19 mm thick
- exclusive quality
- glued in three layers
- sanded to a smooth finish
- chamfered edges
- EAN-coded, labelled

- ✓ constructive
- ✓ excellent form stability
- ✓ high load-bearing capacity
- ✓ excellent resilience to changes in temperature and climate conditions
- ✓ useful for reinforcing
- ✓ ecological material

Examples of applications: High-quality construction of door fronts, shelves and all extension concepts, ...

OUTDOOR WOOD

CARE

for permanently optimal condition

- ✓ structural timber protection
- ✓ measures to extend the durability of timber constructions
- ✓ correct fixing and surface treatment

GCC (German Compact Composite) is a wood-based material with a very high proportion of natural fibres. The principle "Cradle to Cradle" is used holistically, that is, high material health is the top priority and therefore the recyclability of the material and its return to the recycling cycle. In this way, our GCC products contribute to natural and sustainable construction.

durable & environmentally friendly!

GCC HOLZart

- up to 75% wood fibres from sustainably managed forests
- **Cradle to Cradle Certified®** at the Gold level

GCC HARZart

- min. 50% wood fibres from sustainably managed forests
- up to 30% recycled resin (from wind turbine blades, amongst other things)
- **Cradle to Cradle Certified®** at the Gold level

GCC	BRONZE	SILVER	GOLD	PLATINUM
Material health*			✓	✓
Recyclability			✓	
Renewable energy			✓	
Water management			✓	
Corporate Social Responsibility			✓	

*GCC HOLZart achieves PLATINUM, GCC HARZart achieves GOLD in material health.
Cradle to Cradle Certified® is a registered trademark of the Cradle to Cradle Products Innovation Institute.
More Information on certification at www.retteneier.com/en/gcc.

PRINCIPLE "CRADLE TO CRADLE"

- ✓ use of material-healthy substances
- ✓ no use of harmful chemicals
- ✓ recycling of recycled materials in production
- ✓ recirculation into the recyclable material cycle
- ✓ climate-neutral production
- ✓ protection of people and nature

ACCESSORIES FOR ARTWOOD TERRACE DECKING

- ✓ special accessories for the professional construction of ARTWOOD terrace decking
- ✓ easy to install thanks to clip system
- ✓ uniform plank spacing

PRODUCT DESCRIPTION:

- structural accessories for ARTWOOD terrace decking
- fixing systems for ARTWOOD planks

Examples of applications: WPC/GCC terrace floors and wooden decking, garden and path design, ...

	Dimension (mm)	Quantity per Packaging unit (items)	Packaging unit (pack/box)	EAN	Supplier item number
Terrace clip 7 mm, including screws, plastic, black, made in Germany   <div style="position: absolute; top: 480px; left: 270px; background-color: #008000; color: white; border-radius: 50%; padding: 5px; text-align: center;"> ARTWOOD PLANKS FROM 21 MM THICKNESS </div>	25 x 40	30	50	4000868999689	960001500000

PRESERVING OUR FORESTS FOR FUTURE GENERATIONS

The continued existence of our domestic forests is of paramount importance to us. Not only do they provide us with raw material, but they also serve as a habitat and recreational area for plants and animals. **Consequently, it is essential to practice sustainable forestry and safeguard the vitality and vigor of the forest ecosystem.**

MORE ...**

ENGAGING IN CLIMATE CHANGE MITIGATION

1. The timber we use as a raw material absorbs the detrimental CO₂ from the atmosphere.
2. We transform the wood sustainably into CO₂ holders and thereby prolong the retention of the contained carbon. For instance, constructing a low-energy house of timber can reduce emissions by up to 80 tonnes of carbon dioxide.
3. Our rettenmeier® PREMIUM OF WOOD is a great alternative to materials such as steel or concrete, which produce large amounts of CO₂ during their manufacture. It is a more sustainable option that can help reduce emissions and conserve energy.

MORE ...

WOOD – THE SUSTAINABLE RESOURCE OF TOMORROW

As experts in timber, we embrace our responsibility to combat global warming. Aligned with the “Holz rettet Klima” / “Wood Saves the Climate” initiative, we aim to educate and inspire action. Together we advocate for the responsible and innovative use of timber – a remarkable and renewable natural resource, to protect our planet and ensure a sustainable future.

WE REDUCE EMISSIONS

Through active participation in the timber sector’s climate protection initiative, we are dedicated to achieving sustainable emissions reduction. By adhering to the GHG Protocol, we regularly assess our CO2 footprint, allowing us to implement precise, long-term strategies that drive meaningful environmental progress.

rettenmeier® SERVICE - WE PROVIDE A RELIABLE LOGISTICS SOLUTION FOR ALL YOUR NEEDS

We use our **own fleet of vehicles** and a **wide-ranging national and international transport network** to deliver our products on a fast, flexible and efficient way.

A GREENER WAY TO MOVE AROUND

The railway infrastructure guarantees that our sites have dependable and efficient connections. This not only **decreases our carbon footprint** by taking cargo off the roads, but it also enhances the effectiveness of our freight transportation.

WOOD AS A RAW MATERIAL

Wood is one of the oldest construction and working materials, and accompanies each of us through our entire lives, from the cradle to the grave. A long tradition in craftsmanship and in industry have provided experience of how to use the right wood in a suitable way for the various applications. The healthy material

is a commodity and consumer good and can be machined, screwed, glued, drilled, sawed, grooved, turned and carved using simple tools. Wood is the everyday embodiment of nature in its purest form, an environmentally friendly product with an

extremely positive ecological profile. Wood is also a material with a wide range of properties: The various types of wood, the location, the age of the tree, heartwood or sapwood, trunk wood or knotted wood all lead to an extremely wide range of biological, chemical, technological and visual characteristics. This is problematic for rationalised, industrialised processing. But, on the other hand, the variety of properties and appearance brings its own advantages: it is possible to satisfy the desires and requirements of the consumers for the product in a selective way. Strength and load-bearing capacity in construction timber, durability in windows and external doors, colour and wood texture for furniture and in interior fittings, hardness

for parquet flooring or rational production technology and excellent product properties in pulp and paper – the right wood is available for every application concept. For the ideal construction and design of products made of wood, the material properties are crucial, such as the density, strength, the elasticity modulus, resilience, natural durability, permeability, extractive levels, anatomical structure, cell dimensions, the knottiness and the grain orientation. An analysis of the requirements for the product and, derived from that, for the wood material makes it possible to select the ideal type of wood.

FSC®

FSC® stands for "Forest Stewardship Council®" and is an international certification system for the forestry industry. Ten globally applicable principles guarantee that wood and paper products with the FSC® seal originate from responsibly managed forests. These principles are defined in an international standard. The FSC® standard stipulates that the ecological functions of the forest must be preserved, protects endangered animal and plant species against dying out and safeguards the rights of the original inhabitants and employees. However, the belief that an FSC®-certified forest is completely untouched nature is wide of the mark. It is forest that is managed, but according

to strict principles and criteria that can preserve the forest as an eco-system in the long term.

The FSC® was set up in 1993 as a result of the environmental summit in Rio. It is a non-governmental, charitable organisation that is dedicated to promoting the use of the forests on our planet in a simultaneously environmentally friendly, socially acceptable

Das Zeichen für verantwortungsvolle Waldwirtschaft

and economically sustainable manner. The FSC® brings together all the actors who have an interest in preserving the forests in the long term: company owners in the wood and forest industry, environmental associations, unions, representatives of civil society and indigenous peoples. All of the interest groups involved are recognized on an equal basis. This concept is reflected in the chamber structure of the organisation: none of the three chambers can be overruled. And: the FSC® is transparent. As a rule, certified businesses are inspected annually on site by independent experts and the results are then published.

PEFC

PEFC (Programme for the Endorsement of Forest Certification Schemes) is a strictly controlled forest certification programme designed to monitor sustainably managed forests. The PEFC is, so to speak, a global forest protection organisation. With a PEFC-certified product, you can be sure that it comes from sustainably managed and controlled forests.

Among other things, this means:

- The international resolutions of the follow-up conference after the Rio Environmental Summit in 1992 form the basis for the certification system of sustainable forest management.

- Less wood is felled than is being cultivated.
- The forest is always renewed accordingly.
- A safe habitat for plants and animals is preserved.
- Guarantee of a legal origin of log wood
- High standards in occupational health and safety for forestry work
- Safeguarding of employee rights
- In this way, the rights of people who are dependent on the forest or live off it are safeguarded
- The primary objective of the PEFC is to promote the economy, ecology and social compatibility, as well as the documentation and improvement of sustainable forest

management. The focus is also on independence and economic efficiency

The PEFC certification system is recognised worldwide. In addition, the system only deploys independent certifiers, whose reliability is checked regularly.

CE MARK

By applying the CE mark, a manufacturer confirms that the product on sale complies with the applicable, product-specific European directives. The CE mark is not a quality seal, but merely indicates compliance with the minimum statutory requirements. If a four-digit number is applied after the CE symbol, it refers to the involvement of a Notified Body in the conformity assessment procedure. The CE mark was

developed to provide the end consumer with an indication of safe products (on the basis of compliance with the "fundamental (safety) requirements") within the European Economic Area. If one or several EU directives are fulfilled with a product, the product must bear the CE mark. Other markings or quality seals are not permissible next to the CE mark. The CE mark is a prerequisite for placing any products on

the market for the first time for which a CE mark is required in accordance with EU directives, i.e. in all member states of the European Economic Area.

DECLARATIONS OF PERFORMANCE

CRADLE-TO-CRADLE CERTIFIED®

Cradle-to-Cradle Certified® is a registered trademark of the Cradle to Cradle Products Innovation Institute and a global standard for safe, circular and responsibly sourced materials and products. Certification evaluates the following categories:

- **Material health:** The products are manufactured without harmful chemicals. All ingredients are captured throughout the supply chain and investigated for their impact on human health and the environment.
- **Recyclability:** The products are recyclable. The components are designed to be biodegradable or to be used as a technical nutrient for new products.

- **Renewable energy:** The products are manufactured in a climate-friendly way. Production is supplied with renewable energies and unavoidable CO2 emissions are offset.
- **Water management:** Water is recognised as a valuable resource. All wastewater from the production process has drinking water quality and water catchment areas are protected.
- **Corporate Social Responsibility:** Human rights and the integrity of natural systems are respected. Business processes are responsibly and ethically designed to positively impact people and the environment.

The product is assigned a certification level for each category (bronze, silver, gold, platinum). The lowest certification level among the five categories determines the overall certification level of the product.

QNG-READY SEAL

Our products certified by the Sentinel Holding Institute (SHI) are tested for harmful substances and bear the SHI "QNG-ready" seal. The "Quality Seal for Sustainable Buildings", or QNG for short, is a state seal of approval for buildings. Sustainability and health criteria must be met for a new building to be eligible for funding from the Kreditanstalt für Wiederaufbau (KfW).

Our products with the SHI seal meet all requirements and are therefore "QNG-ready".

Advantages of QNG-ready products:

- **Easier planning:** products that meet the complex sustainability and health criteria are listed in the SHI database and make planning easier for everyone involved in construction.
- **More well-being:** Health and environmentally tested materials create a healthy indoor climate and increase well-being.
- **More value:** The use of certified products can increase the value of a property and secure competitive advantages.

- **Secure subsidies:** QNG-ready products facilitate access to KfW subsidies and enable financial benefits through repayment grants.

FLAWS

Our solid wood products are subject to strict quality criteria (in accordance with the "Tegernsee customs"). Depending on the species of wood, individual timber profiles may display a natural range of colours. This varying range of colours gives the product a vibrant appearance and emphasises the natural, individual nature of wood. This is not a sorting criterion. Natural weathering influences, such as sun, moisture and UV radiation, have different effects on the wood, depending on its species. Cracks may form, but these do not have any influence on durability. Splitting is a natural characteristic of wood and not grounds for complaint.

The quantity and size of knots will vary depending on the species of wood, origin and growth-related influences.

These are not faults, and their quantity and size is not limited. Individually knocked-out edge knots and cracks in the area of the knot cannot always be avoided and have no influence on the durability of the timber. The same applies to colour-treated timbers.

Wood is a natural, "working" material. Therefore, under the influence of ambient moisture, dimensional changes to the timber profiles may occur in the thickness and width (up to 10%). This behaviour is known as "swelling" and "shrinking" and should be taken into consideration in planning. The profile and plank dimensions stated are calculated dimensions, which can vary from the actual dimensions by up to 5 cm in the length and up to 1 cm in the width.

In naturally grown materials, moderate, and in isolated cases, severe warping may occur. Ensuring the correct distance from the substructure may counteract warping. Terrace decking that is already warped may be "healthily trimmed". You can reduce warping by cutting the decking on site. Not every plank can be free from warping in its entire length.

QUALITY DATA SHEETS

OUTDOOR WOOD

The possibilities for creative garden architecture and functional, attractive wooden structures are virtually endless. Wood can offer a long service life if a few basic rules are borne in mind. This includes the use of long-lasting species of wood such as Douglas fir and larch. Their heartwood contains constituents that are toxic to pest organisms and so act as a natural

preservative. Sun, wind and rain all affect timber, with various consequences:

- Decomposition of lignin
- Washing-out of chemical compounds
- Acquisition of grey patina
- Bleeding of resin
- Swelling and shrinkage
- Twisting or splitting

- Cracking of coatings
- Iron oxide reaction

These natural timber reactions are acceptable and are not grounds for complaint.

SERVICE LIFE

The information provided is merely a guide to life expectancy under temperate climatic conditions for the

individual classes in relation to each other. It is not possible to provide exact values for any specific service life as this greatly depends on local conditions and the measures taken

to protect the wood. This therefore does not constitute any guarantee or warranty on our part.

Durability classes for wood and wood products in accordance with DIN 350-2

	DURABILITY	WOOD/WOOD MODIFICATION
CLASS 1	 > 25 years	
CLASS 2	 15-25 years	<ul style="list-style-type: none"> • Pine Thermowood • coniferous wood PI
CLASS 3	 10-15 years	<ul style="list-style-type: none"> • Douglas fir • Larch • Siberian larch • quality pressure-treated coniferous wood *
CLASS 4	 5-10 years	<ul style="list-style-type: none"> • Spruce
CLASS 5	 < 5 years	<ul style="list-style-type: none"> • Pine

* Not listed in the standard; practice-based classification by professional institutes.

USE CLASSES

The service life of wooden components used outdoors can be significantly increased if the issue of wood preservation is considered at the design stage. Otherwise, a component's useful life may be greatly affected by local conditions (high level of ambient moisture, permanent

or occasional contact with water, lack of rear ventilation, etc.). On the other hand, favourable installation conditions can also considerably increase service life by, for example, preventing contact with soil or providing cover. Terrace coverings made from wood – especially

coniferous wood – are generally not suitable as barefoot boards. The surface quality in later use largely depends on the factors specific to the particular wood and species of wood.

Use classes for wood and wood-based products according to DIN EN 335-1

	DESCRIPTION		DURABILITY CLASS REQUIRED
CLASS 1	no direct contact with the ground, timber component covered, fully protected from the weather	no moisture (furniture, internal components)	Class 1-5
CLASS 2	no direct contact with the ground, timber component covered, protected from the weather	exposed to high level of ambient moisture; occasional, non-permanent moisture (internal components in wet area, external components without direct exposure to weather)	Class 1-3
CLASS 3	timber component exposed to weather, no contact with the ground	frequent moisture (external components exposed to weather, no contact with the ground, internal components in wet area)	Class 1-2, 3 possibly pressure-treated
CLASS 4	constant contact with freshwater or ground	constant moisture (timber components partially or fully in the ground or water)	Class 1, 2, 3 pressure-treated
CLASS 5	constant contact with seawater	constant moisture	Class 1, 2

WOOD PROTECTION INCREASES THE SERVICE LIFE

Alongside the individual species of wood selected and its natural durability, the service life of timber can be influenced significantly by structural timber protection measures. If wood is exposed to high levels of moisture for lengthy periods, it will be damaged by fungal decay. This can be prevented by the proper planning of structural measures to protect the wood at the execution stage.

Where possible, upright, load-bearing timber components should never come into direct contact with the ground in external areas. To protect them from splashing, it is advisable to maintain a minimum gap of approx. 15 cm (mounting on supports).

Horizontal wooden structures should likewise avoid any direct contact with the ground and be kept a sufficient distance from the subsoil. To prevent water from collecting, horizontal areas should always have a slight gradient.

Another effective method for extending the service life of wood is pressure treatment. Dip impregnation uses either green or yellow colouring. The process involves dipping all of the wood into a bath of wood preservative for anything from a few minutes to several hours. This process is most commonly used during the treatment of wooden components such as shuttering, custom-cut construction timber, windows and doors. The coloured additives are also useful for control purposes, but are not meant to be weatherproof. The weather

resistance of the pressure treatment itself is based on the fastening of the salt solution on the wood. Freshly pressure-treated woods therefore need to be protected against rain for several days. The wood-protection agent itself is generally a water-soluble, colourless or coloured salt concentrate. It contains biocidal active agents. Dip pressure treatment is possible only with a wood moisture content of less than 50%. It acts preventively for wood that is covered or out in the open air without contact to the ground and is effective against fungi and insects that destroy the wood. If the wood is stored properly, it is also effective in preventing blue stain and mould. After drying, the pressure-treated goods can be coated with any paint.

EXTENDS DURABILITY AND SERVICE LIFE

- construct timber components so that water can always run off (use support pads)
- always construct terrace decking with a gradient of at least 2% in the lengthwise direction of the profiling
- minimise the contact area between the substructure and planking or use spacers
- prevent waterlogging
- ensure adequate ventilation
- avoid contact with the ground
- joints between planks and ends should be spaced 5-8 mm apart
- narrow planks are less susceptible to cracking and cupping
- use stainless steel screws that will not rust
- do not carry out metalworking (cutting, grinding, etc.) on wooden terraces (iron oxide reaction)
- clean and maintain timber components at regular intervals

FASTENING, TURNING GREY, SURFACE TREATMENT, YELLOWING

For fixing timber components, stainless steel screws that will not rust are most suitable. When working with galvanised screws, the layer of zinc may become damaged, which can lead to corrosion and cause the wood to discolour. In addition, species of wood such as Douglas fir which are rich in tannin react to contact with iron, with the timber becoming darker.

Wood used outdoors is permanently exposed to the weather. UV radiation and rain affect

the surface. This brings about changes in the chemical composition of the timber, causing constituents to wash out. The timber turns grey in the open air in the course of a natural process.

Surface treatment with suitable coatings can offer a relative degree of protection from moisture and UV rays. When used in the open air, wood has to be painted regularly – at least twice a year – to maintain the appearance and effectiveness of the coating.

Wood that is used in the interior and so is not exposed to weathering turns yellow after some time through a natural process.

CARE AND
MAINTENANCE

SPRUCE/FIR

PINE

BEECH

OAK

TYPE	Coniferous wood		Coniferous wood		Hardwood	Hardwood
PRE-FINISHING TREATMENT	technically dried; untreated surface	technically dried; PI/ not PI	technically dried, untreated surface, partly thermal pre-finishing treatment	technically dried, PI/ not PI	technically dried, untreated surface	technically dried, untreated surface

OCCURRENCE OF KNOTS						
RESIN BLEEDING						
REACTION WITH IRON OXIDE						
SPECIAL FEATURES	<p>SPRUCE/FIR darkens under the influence of light to a yellowish brown colour. When used in external areas, it is necessary to ensure effective protection through architectural or structural measures and through specialist treatment with suitable wood protection agents. Pre-finished wood products are finished with non-pressure treatment by means of a resource-saving immersion process, making them more resistant to the ingress of wood-destroying fungi or insects, as well as making them more durable.</p>		<p>PINE darkens under the influence of light to a yellowish brown colour. When used in external areas, it is necessary to ensure effective protection through architectural or structural measures and through specialist treatment with suitable wood protection agents. Pre-finished wood products are finished with non-pressure treatment by means of a resource-saving immersion process, making them more resistant to the ingress of wood-destroying fungi or insects, as well as making them more durable. Thermo pine is the preserved wood without chemical additives for outdoor use. High temperatures (approx. 210°C) and steam are used to modify the physical properties of the wood in a process taking several days. This changes the chemical structure, reducing the density, strength and modulus of elasticity of the timber and removing resin and other constituents.</p>		<p>BEECH has very good strength properties, high degree of hardness and is tough and not very elastic; high resistance to abrasion; despite high bulk density, it is easy and clean to process with manual and mechanical tools; main areas of application include furniture production, due to the high degree of hardness, in stairwell construction, toy construction or use as plywood; easy to polish, stain or colour with other colours. Beech may be used only conditionally in external areas because of its moderate resilience and low natural durability.</p>	<p>OAK has excellent properties for doors, window and stair construction. Due to its excellent high strength properties, high elasticity and high bulk density, it can be easily and cleanly processed with all hand and machine tools. The oak timber can be preserved and matted very well and is designed as construction timber for the highest requirements in terms of beauty, strength, hardness and durability.</p>

ACACIA/ROBINIA

**ARTWOOD
WPC/GCC**

Hardwood	Coniferous wood	Coniferous wood	Hardwood	Composite material
technically dried, oiled/untreated surface	technically dried, untreated surface	technically dried, untreated surface	technically dried, untreated surface	surfaces brushed and partially polished
alternating growth structure, finished with a dark brown oil/untreated yellowish white	warm, whitish pink to reddish honey coloured stain	warm, whitish pink to reddish honey coloured stain	yellowish-white to reddish-white	brownish to terracotta-coloured and grey to anthracite-coloured finish
South East Europe, Asia	mainly domestic, France and Benelux	mainly domestic, France and Benelux	EU	Domestic

ACACIA/ROBINIA have a high bulk density as well as very good durability and thus excellent strength. Despite its high elasticity, easy and clean workability are benefits of this type of wood. The surface is oiled and has a decorative and elegant appearance.

When exposed to light and the effects of the weather, **DOUGLAS FIR** will become darker until it acquires a silver-grey patina. Such discolouration can be prevented by the use of a wood oil or glaze. The variations in the colour of terrace timber can be evened out with stained wood oils. Easy to process.

When exposed to light and the effects of the weather, **LARCH** will become darker until it acquires a silver-grey patina. Such discolouration can be prevented by the use of a wood oil or glaze. The variations in the colour of terrace timber can be evened out with stained wood oils. Easy to process.

BIRCH is a versatile wood species with good strength properties and medium hardness. It is more elastic than beech and has good abrasion resistance. Birch wood has a uniform structure and a light, yellowish-white color, which makes it particularly attractive for furniture and interior fittings. It is easy to work with hand and machine tools and is good for polishing, staining and coloring. The main applications for birch wood are furniture manufacture, interior fittings, toy construction and plywood. Due to its elasticity and strength, it is also used in boat building and for sports equipment. However, birch wood can only be used outdoors to a limited extent, as it has a low natural durability and is susceptible to the effects of weathering.

ARTWOOD products are free of knots and splinters, have a dye-saturated surface, are 100% recyclable, non-hazardous – material is suitable for the production of children's toys. Easy to install with clip system, with non-visible screw connections; clean with water or pressure cleaner (washer jets) Composite material consisting of approx. 75% coniferous wood or 45-65% natural fibres and 10-30% used material resources and approx. 25% fresh polymers and additives. Colour development: ARTWOOD is a natural product that is subject to changes in colour due to weathering.

GENERAL TERMS OF BUSINESS

TERMS AND CONDITIONS OF SALE AND DELIVERY of ("Seller")

- Rettenmeier Holzindustrie Wilburgstetten GmbH, Industriestr. 1, 91634 Wilburgstetten, Germany
- Rettenmeier Holzindustrie Wilburgstetten GmbH | Werk Burgbernheim, Rothenburger Straße 48, 91593 Burgbernheim, Germany

- Rettenmeier Tatra Timber s.r.o, Pod lipami 68, SK-03301 Liptovský Hrádok, Slovak Republic
- Rettenmeier Holding AG, Industriestr. 1, 91634 Wilburgstetten, Germany

1. GENERAL INFORMATION

These Terms and Conditions of Sale and Delivery apply exclusively to companies (Section 14 of the German Civil Code (BGB)), legal entities and legal special funds. They constitute an integral part of all offers and contracts for deliveries and services of the Seller, including in ongoing and future business transactions. Insofar as they do not contradict these Terms and Conditions of Sale and Delivery, the customary practices of the wood industry shall also apply, in particular the "Tegernsee customs" as amended with the related appendices and annex. Any deviating agreements and conditions, in particular purchasing conditions, shall only be binding if they are confirmed by the Seller. If two letters of confirmation containing deviating provisions cross one another when sent, the letter of the Seller shall apply. The Seller shall collect, process and store personal data only to the extent necessary to fulfil the contract.

2. Offers are without obligation. The Seller may accept offers of contract within four weeks. The right to make a prior sale is always reserved. Deliveries shall be subject to correct and complete delivery of materials to us from our suppliers. All verbal agreements require immediate written confirmation from the Seller. This also applies to contracts concluded by employees or trade representatives of the Seller. Offers made by telegram, telephone or verbally shall only apply insofar as they correspond to the offer confirmed in writing. The aforementioned provisions do not apply to agreements made after the contract has been concluded.

3. In the absence of any deviating agreements made on an individual basis, prices are ex warehouse or ex place of dispatch of the Seller and exclude packaging, protective boards and boards for placing in between (supporting timbers), shipping, unloading and any installation work that may have been agreed. These items will be charged separately. The price list of the Seller that is valid on the day concerned shall apply. All prices exclude the applicable statutory value added tax. If deliveries are made outside Germany, the Seller shall not be liable for taxes or charges incurred there.

4. Delivery times must be agreed separately. Mobilisation, war, operational disruptions, strikes, lockouts and other instances of force majeure shall entitle the Seller to postpone delivery until the situation concerned has been resolved or, if the delivery finally becomes impossible, to refrain from making the delivery. If deliveries are made outside Germany, the Seller shall not be liable for unforeseeable official import or export restrictions. If a non-binding delivery date or a non-binding delivery deadline has been exceeded by more than four weeks, the purchaser shall be entitled to send a written request to the Seller to deliver the goods by a reasonable deadline. Upon issuance of this reminder, the Seller shall be deemed to be in default. The legal consequences are governed by law and these General Terms of Business, in particular Point 7.

5. The place of performance for the delivery shall be the registered address of the Seller or, at its discretion, the place of dispatch; the place of performance for payment shall be the registered address of the Seller. Deliveries made carriage-paid to the destination or carriage-paid to the place of use require roads suitable for heavy freight vehicles. The delivery must always be unloaded by the purchaser immediately and at its expense. Shipping shall be at the risk of the purchaser, even if carriage-paid delivery has been agreed. The transport shall be insured only at the express instruction of and at the expense of the purchaser. If delivery is made carriage-paid to the destination, at the request of the Seller the shipping costs must be submitted by the purchaser or recipient without any discount.

6. If the purchaser enters into default of acceptance, the Seller shall be entitled to withdraw from the contract after an appropriate deadline, or to effect a substitute sale or to insist on performance.

7. Warranty shall be adopted for the services of the Seller in accordance with the following provisions. The Seller shall be liable without restriction in accordance with the statutory provisions insofar as a contractual obligation has been breached, either intentionally or as a result of gross negligence, by the Seller or its vicarious agents, or loss of life, physical injury or impairment to health has occurred or the Seller has assumed a guarantee. Liability for slight negligence shall be excluded unless an essential contractual obligation (material contractual obligation) has been breached. In this case, the liability shall be restricted to the amount of loss typically foreseeable for the contract. These liability restrictions shall also apply if claims to right of recourse in accordance with Section 478 of the German Civil Code (BGB) are asserted against the Seller as a supplier. The liability restrictions shall not apply to claims in accordance with Sections 1 and 4 of the German Product Liability Act (Produkthaftungsgesetz). The unavoidable and natural shrinkage of the board as a result of drying does not constitute a defect.

8. Complaints concerning any identified defects must be submitted in writing immediately after the defects have been identified. To this end, the goods must be inspected immediately following delivery. If a defect is only identified at a later stage, the complaint must be submitted immediately after the defect has been identified. If no written complaint is submitted to the Seller, the goods are considered approved unless the defect was not identifiable. If transport damage is identified when the goods arrive, before the goods are unloaded a written confirmation must be obtained from the freight forwarder as evidence for a claim for compensation to be submitted to the freight forwarder. The same shall also apply to transport by ship and rail.

9. Payments are due within 30 days of provision at the storage location in full without deductions. The purchase price shall become due and the consequences of default shall become effective without a reminder on the day determined on the basis of the invoice date and the payment period. In the event of default in payment, default interest in the amount of 8% above the base rate of the Deutsche Bundesbank shall be incurred, unless the Seller proves that it has incurred a higher loss. The purchaser shall be entitled to prove that no or a lower level of loss has been incurred. Bills of exchange and cheques shall be accepted only as conditional payment. It is not permitted to withhold payments as a result of any counter-claims whatsoever, including from other business transactions of the purchaser, or to set off claims from the same contractual relationship, unless the claim is legally established or is not contested by the Seller.

If, following the conclusion of the contract, the Seller becomes aware of circumstances for which the purchaser is responsible and that call into question its creditworthiness (in

particular default), the Seller shall be entitled to retain any advance payments provided that interest is paid on these at the rate at which the Seller obtains refinancing. The Seller shall also be entitled to make payable the entire remaining debt from the order. If the setting of a deadline has been unsuccessful and the invoiced goods are ready for dispatch, the sold goods shall be stored for the account of the purchaser. Storage costs, warehouse rent and fire insurance costs may be charged to the purchaser. The Seller shall be under no obligation to provide insurance. The purchaser shall be entitled to prove to the Seller that no or a lower level of loss has been incurred. If payment has not been received for the invoiced goods that are ready for dispatch despite the Seller having issued a reminder with a deadline, the Seller shall be entitled to withdraw from the contract. Insofar as goods of the Seller from the contractual relationship still exist, they can be immediately reclaimed or collected by the Seller or its representative at the expense of the purchaser.

10.

a) The goods shall be delivered in accordance with Section 449 of the German Civil Code (BGB) with the following additions.

b) All goods delivered to the purchaser shall remain the property of the Seller until full payment of all claims of the Seller against the purchaser (including claims arising in the future), including from other business transactions, i.e. also of a possible current account balance, insofar as this is recognised by the purchaser.

c) The purchaser shall be entitled to resell or to use the reserved goods in the ordinary course of business. A prerequisite for this is that the claims (invoice amount including value added tax) of the purchaser from the resale of the reserved goods are assigned to the Seller, regardless of whether the reserved goods are resold without being processed or after being processed and whether they are combined or incorporated and whether they are resold to one or several buyers. The assigned claim shall serve as security for the conditional seller only in the amount of the value of the reserved goods sold in each case. The assignment shall be excluded only if goods are resold as part of actual current account transactions.

d) In the event that the reserved goods are sold by the purchaser together with other goods not belonging to the Seller, either without being or after having been altered, the assignment of the purchase price claim shall only be valid in the amount of the value of the reserved goods constituting the object of this purchase contract. At the request of the Seller, the purchaser shall be obliged to store reserved goods separately and to only process and resell reserved goods separately from other goods.

e) The purchaser shall be entitled to collect the claims from the resale despite the assignment. The authority of the Seller to collect claims remains unaffected by the entitlement of the purchaser to collect claims. However, the Seller shall not collect the claim itself as long as the purchaser complies with its payment obligations in an orderly manner. If the purchaser defaults on payment or if insolvency proceedings are commenced with respect to the purchaser or are not commenced due to lack of sufficient assets, the purchaser shall be obliged to inform the Seller about the debtors of the assigned claims as well as to notify the debtors of the assignment and to instruct them to effect payment exclusively to the Seller.

f) The purchaser shall also assign the rights and claims to which it may be entitled with respect to its clients in accordance with Sections 647 and 648 of the German Civil Code (BGB) to the Seller, and shall entitle the Seller to assert these claims and rights in its own name and for its own account in the amount of the claim that has arisen in accordance with the preceding provisions.

g) The purchaser shall not be entitled to assign or pledge its claims from the resale of reserved goods in their original or altered state to a third party.

h) The processing or alteration of the delivered goods shall always be carried out for the Seller. The expectant right of the purchaser to the delivered product shall extend to the altered or processed product. The processed goods shall serve as security for the conditional seller only in the amount of the value of the reserved goods. If the purchaser processes the goods with other objects not belonging to the Seller, the Seller shall be entitled to co-ownership of the new product in the ratio of the value of the reserved goods to the other processed objects at the time of processing. For the new product created as a result of the processing, the same as for the reserved goods applies otherwise. It is considered a reserved good pursuant to these terms and conditions. The same shall apply mutatis mutandis if the reserved goods are combined or incorporated with other objects.

i) Goods subject to reservation of title in their original or altered state may only be sold in the ordinary course of business. They must not be pledged nor assigned by way of security without the consent of the Seller.

j) If the purchaser has assigned, or in future will assign, its goods warehouse either in whole or in part to another party by way of security, then the purchaser's intention to transfer ownership to the other party shall not relate to the goods subject to reservation of title in their original or altered state.

k) The purchaser shall be obliged to insure goods subject to reservation of title including in their altered state against fire and theft as extraneous products and to prove this to the Seller upon request. The reserved goods must be handled with care. The purchaser hereby already irrevocably assigns all claims to which it is entitled from this insurance to the Seller for the duration of the reservation of title in the amount resulting from these provisions on reservation of title.

l) Access by third parties to the goods subject to reservation of title in their original or altered state or to the assigned claims must be notified to the Seller immediately in writing including details of the third party's address to which summons may be served.

m) As soon as the purchaser encounters any difficulties of any kind in making payment, it may only possess reserved goods or assigned claims with written consent from the Seller.

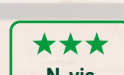

n) The reservation of title of the Seller is conditional in that, upon full payment of the claims of the Seller from the business relationship, the ownership of the reserved goods is then transferred to the purchaser and it is granted the assigned claims. The Seller undertakes to release the securities to which it is entitled in accordance with the preceding provisions insofar as their value exceeds the claims to be secured by 10%.

11. This present contract shall be governed by the law of the Federal Republic of Germany. In the case of contracts with merchants, legal persons under public law or special funds under public law and with foreign citizens without a place of jurisdiction within Germany, the place of jurisdiction shall be Ansbach, Germany. However, the Seller reserves the right to also initiate proceedings at the place of jurisdiction of the purchaser.

12. These provisions constitute the agreements in their entirety. Additional verbal or written ancillary agreements or additional agreements do not exist. Proof to the contrary is hereby not excluded. Should one or more provision(s) of this contract be or become invalid, this shall not affect the validity of the other provisions of this contract. In such cases, the parties undertake to fill the resulting omission with a regulation that corresponds in economic terms to that which the parties would have agreed had they been aware of the invalid provision(s).
